Personal Projects

[b]1. **Amazona Ecommerce App-** [b]It is like a clone of popular e-commerce site Amazon. It provides user authentication so a user can view their profile in this site based on their purchase history. It has also the admin panel for managing CRUD. You can purchase your things using different interaction provided by the site. it will give you the payment option like pay pal, stripe and shipping facilities.

Live URL- <https://amazonaa.netlify.app/>

Technology Used- React.js, Redux, Node.js, Express.js, MongoDB, PayPal API

2. Video Rental App-

Developing a video rental application. It provides several user interaction like you can search movies, filter movies using specific genres, like movies. You can also create movie after proper authentication. You can go through the different pages to pick your favorite movie.

Live URL- <https://reactjs-vidly-frontend.herokuapp.com/movies>

Technology Used- React.js, Node.js, Express.js, MongoDB

3. **Chatting App-**It is a real time chat app. It will give you isolated chatting environment providing different room so nobody can not see the messages from outside of the room. You can chat with your friends, team mates in specific room.

Live URL- <https://chatt-app-heroku.herokuapp.com/>

Technology Used- Vanilla Javascript, Node.js, Socket.io
